

Jhonantans Rocha

Software Engineer

About me

Hi, I am Jhon Rocha. I am a Software Engineer with eight years of experience building efficient data intensive applications. My main area of work is Back-End, using Javascript, Node.js, AWS, Azure, GCP, Postgres, and MySQL. I also have experienced working using React, Python (Django) and Go (Gin) projects.

Experience

Senior Software Engineer

- [Method](#)
- *Mar 2024 – Present*

As a senior engineer, I was responsible for optimizing and implementing new features for APIs and React screens. I was responsible for integrations with third-party APIs. Stacks used: GCP Kubernetes Engine, Serverless functions, PostgreSQL, Redis.

Senior Full Stack Engineer

- [Toptal](#)
- *Oct 2023 - Mar 2024*

Working in client projects as a Senior Full-Stack Engineer, responsible for developing APIs, Shell Scripts and React Screens. Stacks used: Golang, Python, Django, Node.js, Azure and AWS.

Senior Software Engineer

- [Nearform](#)
- *Jan 2022 – Oct 2023*

As a Senior Software Engineer, I build, deploy, and maintain scalable projects for diverse clients. The main project I worked on was about implementing pipelines on Azure DataFactory and FunctionApps to integrate a Postgres Datalake, two MSSQL databases, and Salesforce. Besides those, some of the technologies used were: Node.js, Typescript, Javascript, Python, and Azure.

Team Lead

- [BairesDev](#)
- *Aug 2020 – Dec 2021*

As a leader, I am responsible for helping the team's performance by managing tasks, planning and assignments, and ensuring code cohesion and efficiency.

Software Engineer

- [BairesDev](#)
- *Dec 2018 – Sep 2020*

As a core member of the services team, I have been working on developing solutions for the client. My primary focus is to support and evolve a Node environment entirely powered by AWS. Part of the structure runs as a monolith and part as microservices, using Lambdas, SNS, and SQS. It is also part of the work to develop some React tools for internal usage.

- Back-End: Node (Sails.js, Express)
- Operation: Amazon AWS (EC2, S3, Lambda, SNS, SQS, Elasticache, RDS)

- Front-End: React

Systems Analyst

- *Metrópolis Mídia e Comunicação*
- Feb 2018 - Nov 2018

Development and maintenance of a Newspaper Content System. Major concerns were high availability, consistent quality, and speed to the end consumer.

- Front-End: Bootstrap, Ionic 2, Angular 4, Vue.js, Pug, Stylus
- Back-End: WordPress, PHP, and MySQL
- Operation: Amazon AWS (EC2, S3, Lambda, RDS)

Full Stack Developer

- *Moringa Digital*
- Feb 2016 - Jan 2018

Acting in the development of hybrid applications for Android and iOS, implementation of web systems and creation and maintenance of websites and APIs.

- Back-End: ASP, Node, and MySQL
- Front-End: HTML5/Javascript
- Hybrid Application Tools: Intel XDK, Cordova
- Frameworks: Angular 1 & 2, Ionic 1 & 2

Member (Academic Team) at Robot Soccer Team

- *UnBeatables: UnB humanoid robot soccer team*
- Sep 2014 - Aug 2016

I was responsible for the network area, handling communication between robot-to-robot and robot-to-computer. I also worked in movement and locomotion, expanding the robot player's set of gestures and actions. Finally, I developed the structure of the behavior state machine, implementing the reaction to events autonomously and elaborating new roles for the player.

Technologies used:

- NAO Robot
- C++
- Python
- Communication Networks (UDP/TCP)
- Linux
- State Machines

Prizes:

- World Champion, Robocup 2015, Drop-In Only category
- World Champion, Robocup 2016, Drop-In Only category
- Latin American Champion, LARC/CBR 2015, Standard Platform League
- Latin American Champion, LARC/CBR 2016, Standard Platform League

Researcher (Academic Research)

- *University of Brasilia (UnB)*
- Jan 2014 - Dec 2016

Development and application of Fuzzy controllers based on the Takagi-Sugeno method (TS) to an industrial-level plant controlled by a Rockwell CLP.

Technologies used:

- Fuzzy Logic

- PI Controller
- PLC Programming: Ladder, Structured Text, Function Blocks
- Matlab

Education

Mechatronics, Robotics and Control and Automation Engineering

- *University of Brasilia (UnB)*
- Graduation 2011 – 2016

The course brings together knowledge in Mechanical, Electrical, Electronics and Computer Science aiming at the development of control and automation solutions for industrial and non-industrial environments. The points specially studied are:

- Control design and implementation
- PLC Programming
- Robotics
- Programming
- Mechanical Engineering
- Electrical Engineering
- Electronics

Skills & Proficiency

- Node (Sails.js, Express) => **5 Years**
- Javascript (ES5, ES6) => **5 Years**
- AWS (EC2, S3, SQS, SNS, Lambda) => **5 Years**
- Python (System Programming) => **3 Years**
- C/C++ (System Programming) => **3 Years**
- Angular & Ionic & Hybrid Mobile Apps (Cordova) => **3 Years**
- HTML5 & CSS => **3 Years**
- PHP & WordPress => **1 Year**
- .NET & ASP & VBA => **2 Years**
- PLC: Ladder, Structured Text, Function Blocks => **1 Year**
- RUST: **Learning**

Languages

- Portuguese: Native
- English: Fluent
- Spanish: Intermediate

Interests

- Linux
- Open-Source Projects
- Machine Learning
- Algorithmic Trading
